

## PIBAS Switch Controller

PSC is a switch that handles and controls the enterprise network communication for all transactions generated through external channels. Shields All Network / Deployment Complexities from Other Applications, Facilitates Operation of All External Channel Modules, Works Seamlessly regardless of Deployment Architecture and Provides an Economical Way of Performing Inter Branch Transactions are the some of the highlighted features of PSC.

### Features

- Shields all network / deployment complexities from other applications
- Facilitates operation of all external channel modules
- Works seamlessly regardless of deployment architecture
- Provides an economical way of performing Inter Branch transactions
- Reduces the Total Cost of Ownership (TCO) of the total enterprise banking system
- Supports heterogeneous environments and databases
- Facilitates event monitoring, auditing and logging
- Provides security and encryption facilities
